stone products

natural stone

Natural stone is one of the oldest building materials known to man and is just as popular today as it has always been. Any project incorporating natural stone in its construction is using a symbol of quality and tradition, hence its use in some of the country's most impressive and attractive buildings.

Modern technology and techniques have revolutionised the way natural stone is processed for the construction trade ensuring it is very easy to handle and lay.

Our stone is 'sawn on bed' and available in several natural shades to suit your location. There are several course heights and bed depths available to choose from, we are pleased to provide a sample service on request.

As an alternative to natural stone we can also supply reconstituted stone in a range of colours and textures.

Surrounds

Cast stone is second to none for versatility, cost-effectiveness and quality. Product range includes cills, heads, keystones, quoins, copings, bandcourses and pier caps for use in residential, commercial and architectural schemes of any size.

All products are specified by experienced CAD engineers, who will happily share their experience and knowledge to help you find products that match your specific application.

As part of our ongoing development of stone products, lightweight stone solutions are available in various formats, ideal for use where weight or shape restrictions apply.

For further details on stone products please contact us on **0845 688 8835** or e-mail sales@banburyinnovations.co.uk.

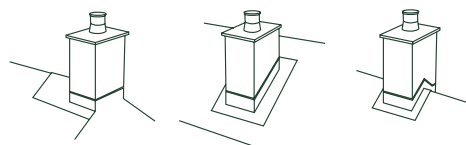

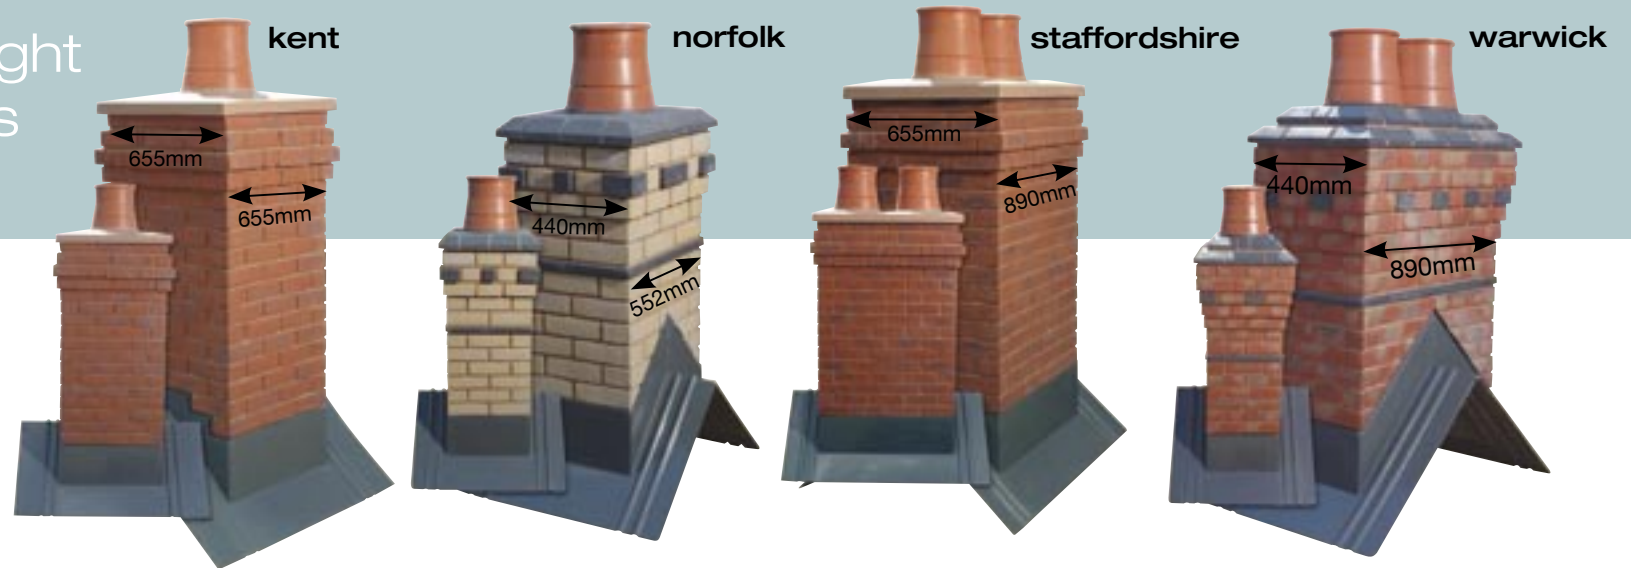

GRP is fast becoming the preferred choice for chimneys, dormer windows, canopies and door surrounds offering a lightweight, cost effective option designed to meet the modern day requirements of off-site fabrication.

Litestack lightweight chimney solutions

Litestack is a cost effective, premium quality product providing the appearance of a traditional chimney stack; available as a purely cosmetic chimney or a working chimney suitable for Class II gas appliances. As a lightweight ready to install chimney stack, Litestack is very easy to use - being simply lifted into position, bolted onto the roof trusses and then leaded in the normal way.

Each chimney can be tailored as much or as little as required to meet your needs – we can match the pitch, the texture, the colour, the pots and the capping to suit your build.

The most popular Litestack chimneys are those based on our four stock designs – the Kent, Norfolk, Warwick and Staffordshire.

End Ridge Mono Pitch Mid Ridge

Each chimney is available in an end ridge, mono pitch or mid ridge format. We now have the facility to pre-lead your chimney to enable even more rapid installation.

- Realistic
- Cost effective
- Lightweight
- Quick and easy to install
- Strong and weatherproof
- Limitless variations

*The term handmade following the brick name indicates the style and finish of the brick and does not refer to the means of production. Please call for further information.

Due to product improvement and development we reserve the right to alter the contents of this catalogue without prior notice being given.

Our products are derived from naturally occurring materials. Colours depicted are as accurate as possible, given the limitations of printing and natural variations of the products themselves. We strongly recommend that your final decision is made against actual samples and/or brick panels. Please contact us for further details.
